Corning Cable Systems Signs Agreement with iTRACS Corporation

Two firms will cooperate in creating intelligent cabling solutions

BERLIN, GERMANY — Corning Cable Systems GmbH & Co KG (CCS), part of Corning Incorporated's (NYSE:GLW) Telecommunications segment, announced today that CCS and iTRACS Corporation have entered into an agreement to supply iTRACS compatible intelligent cabling solutions in Europe, Middle East & Africa (EMEA). Incorporating iTRACS will simplify moves, adds and changes, and enable comprehensive management of the customer's network, reducing overall IT management costs.

"iTRACS is the ideal company for intelligent network infrastructure management," said Oben Uluc, executive director of marketing for Corning Cable Systems EMEA. "Our customers need to manage all changes and additions to their network infrastructure with a high level of efficiency and reliability. This is especially critical in the data centre environment."

CCS's decision to offer intelligent patching in the EMEA region was influenced by its interest in developing new solutions to meet customer needs and to ensure the completeness of Corning Cable Systems LANscape® Solutions product portfolio. Corning Cable Systems LANscape Solutions is a complete offering of products (including cable, connectors, hardware and pre-terminated solutions), services and support for fibre optic and copper cabling.

Peter Pela, chairman, founder and chief technology officer at iTRACS said "CCS is our newest strategic OEM customer. The addition of the market leading fibre connectivity company, further endorses iTRACS' leadership position in providing the technology that powers the substantial majority of the world's intelligent infrastructure

solutions. CCS's appointment means the market will have another best of breed intelligent solution to choose from and we look forward to working with CCS on developing new solutions particularly focused on fiber."

About Corning Incorporated

Corning Incorporated (www.corning.com) is a diversified technology company that concentrates its efforts on high-impact growth opportunities. Corning combines its expertise in specialty glass, ceramic materials, polymers and the manipulation of the properties of light, with strong process and manufacturing capabilities to develop, engineer and commercialize significant innovative products for the telecommunications, flat panel display, environmental, semiconductor and life sciences industries.

About iTRACS Corporation

iTRACS provides intelligent infrastructure management software for professionals who require immediate visibility of physical components in their complex, diversified networks in order to maintain high availability and security, ensure compliance and provide troubleshooting. iTRACS performs like a network GPS system, automatically providing real-time identification and reporting of connectivity, asset usage and port location for optimal efficiency. Users gain real-time visibility into their entire infrastructure for improved planning, allocation, analysis, service utilization and security of physical assets. iTRACS is headquartered in Chicago, Illinois, with development offices in Tempe, Arizona. The company has sales offices across the U.S. and the United Kingdom; sales, engineering and manufacturing facilities in Singapore; and distribution partners throughout the U.K., Europe, Middle East, Africa, Asia and Australia.
